

INTDV's stand attracts record turnout at GITEX 2020

INTDV uncovers a wide spectrum of artificial intelligence and machine learning solutions in the 40th edition of the global tech show

Monday, 07 December 2020 – 12:00

INTDV, one of the Middle East's leading emerging tech companies, headquartered in Riyadh with offices operating in Dubai, Kuwait and Cairo, is participating in the 40th edition of GITEX 2020, which kicked off yesterday, at the Dubai World Trade Centre. The company's stand at the event has attracted an impressive turnout from visitors, who have shown a keen interest in the field of robotics and artificial intelligence.

The event marks the fifth participation of INTDV in the biggest tech gathering in the Middle East, North Africa and South Asia, where it has built its stand at hall # 7 – C40 to demonstrate five groundbreaking products. The latest product innovations include Communico ChatBot, Communico Robotics Content Management System (RCMS), Pepper, Digital Avatar and SMP Robotics.

"In addition to the official recognition, GITEX is undoubtedly one of the premium global exhibitions gathering top tech players. Our star products, namely Pepper and Digital Avatar, are here today to interact in person with visitors, who are able to test them through humanlike communication and live chatting respectively," said Mohammad Al Ajmi, the Chief Executive Officer of INTDV. Participating in this year's 'tech talk' sessions, Al Ajmi is delivering a keynote speech and providing valuable insights about 'Robotics Meets the Real World'.

Pepper is the world's first social humanoid robot, which is able to recognize faces and basic human emotions. It has been optimized for human interaction and enabled to engage with people through both conversation and a touch screen.

Digital Avatar comes to life with the use of AI technology, which enables photo-realistic characters to move, listen, talk and see. INTDV's avatars support the entire NLP stack, including voice recognition and speech synthesis. Moreover, Digital Avatar provides two state-of-the-art face replacement solutions based on its proprietary facial synthesis technology: a real-time version and a high-fidelity version. By providing a video or live stream, INTDV can replace your face with any person you want.

“In a very short time, INTDV has managed to build a reputation as one of the key providers of artificial intelligence, machine learning and automation solutions to local and regional markets; thanks to the cutting-edge technology professionally applied to promote digital engagement. Our AI-powered platforms help businesses boost their productivity and enhance their outcomes,” added Al Ajmi.

GITEX Technology Week 2020 is a fertile ground for investment and partnership opportunities offered by world-class exhibitors. It facilitates a way for tech giants to effectively communicate and collaborate to create more innovative technologies, reaching new horizons at the digital space.

About INTDV

Founded as a tech arm of KSA-based Al Quiyadia Group, INTDV is a robust developer of AI and ML solutions for businesses that play vital roles in the most important aspects of life worldwide, and a main player in the world of bots. In a very short time, it has managed to attract a large number of high-profile domestic and regional customers operating in various sectors, including healthcare, entertainment, manufacturing, transportation, and consumer goods and retail.
